

CuraNatura

## ***Cancer is curable!***

(Book title from Romano Zago - 38<sup>th</sup> edition)

(Transcript of excerpts from lectures given on this topic in Odivelas, Portugal, by Romano Zago, referring to the *Aloe Arborescens* plant)

**"According to data collected from cures already performed, we can conclude the following:**

- Liver Cancer: easy cure.
- Cancer of the prostate, breast, ovaries, uterus and leukemia: cure relatively easy.
- Lung cancer: the cure requires prolonged treatment.
- Lymphoma: cure most difficult of all, but there are cases that have been resolved.
- Cancer brain, throat, stomach, intestines and anus: many proven cures.
- Other diseases cured: rhinitis, other allergies, anemia, bowel regulation and acidity in the stomach (gastritis, ulcers, reflux ...), diabetes, rheumatism, arthritis, skin in general, depression, anxiety, cellulite, obesity, varicose veins, asthma, sinusitis, immune system."

**CuraNatura** added, with 20 experience years: **PREVENTION IS BETTER THAN CURE!**

**HOW TO TAKE:** Can be taken as a preventive or as curative (in the case of a person already having cancer, or several other diseases).

- **As a preventive:** You should stir before using. Take 15ml between 30 and 15 minutes before each meal (morning, noon and night). It is suggested to take two bottles of 500g twice a year (preferably in spring and autumn), and when problems arise, such as influenza, allergies...

- **In the case of having cancer:** You should stir before using. Take 45 ml between 30 and 15 minutes before each meal (morning, noon and night).

Should continuously take the content of three bottles of 500g and then make a medical examination which will indicate whether there are improvements, the cancer stabilized, or if the disease continues to evolve. For the treatment to produce better results, it is convenient, during the period of treatment not eat red meat or pork, animal fats, eggs, milk or fish, but can eat swordfish or hake.

After taking four bottles an interval of 5 to 8 days must be made and then resume with two 500g bottles with the indicated intervals, until clinically cured.

If during treatment (preventive or not) a little unusual situations arise, such as vomiting, diarrhea, rash, abscesses, or dark urine that appears to contain blood, or other symptoms, this should not be of concern, but rather satisfaction, once it is the body eliminating evil toxins.

It is not appropriate at this stage to stop the treatment. This situation lasts at most three to four days."

**In addition to the success stories that Romano Zago and ourselves experienced, see some scientific information that supports the contents of this document in**
